

### ***Creating the Budget, Exercise 11, Purchasing a Vehicle***

You will need to lease or buy a used or new vehicle for transportation. (New meaning brand new or leased) and will have \$2,500 for a down payment and have to spend at least \$5,000 for used or a new car. There is no restriction on the lease cost.

#### ***Considerations:***

- If you do not lease a vehicle then the used or new car will require no less than \$2,500 in financing and your finance term must be three years or more.
- Be sure to check if there any ancillary fees such as tax, title and destination.
- Go the Internet and search dealerships, online line sellers such as TrueCar or Auto Trader or car manufacturer's websites for offerings (one simple search is to type in the car you desire and go from there)
- You may opt to call a vehicle seller and speak to a live person.
- Consider gas mileage as you will determine the amount of gas you'll need each month
- Consider at least three options in your search before you narrow it down to one.

#### ***Given Variables***

- Purchasing a new car or leasing will come with a standard warranty
- Buying a used car may not have a warranty

Go to [bankrate.com/auto](http://bankrate.com/auto) and input basic information such as zip code and length of the finance term and choose the lowest interest rate. It may just list the average rate which you can choose. Once you have the interest rate go to <http://www.bankrate.com/calculators/auto/auto-loan-calculator.aspx> and input the interest rate, amount financed and the term to determine the monthly payment. Use the sample grid below to document your results. Use the **Automobile Comparison** grid provide on the website.

Which car do you want to choose? What lead you to that decision? **Tips:** If you lease a vehicle consider the amount of miles that you drive in that if you exceed the limit you will assessed further charges. Additionally, the down payment on the lease may be lower than \$2,500. So you have two options: one is to pay the entire \$2,500 which will reduce the monthly cost or pay the lesser amount and you will have excess cash in your savings.

As for leasing or buying, when choosing a vehicle, you will be able to determine how much gas, maintenance and auto insurance will cost in the budget. (Discussed in the subsequent exercises). Therefore, as you narrow down your choice you will need to consider those items before making a final decision.

***Auto Grid Comparison***

<b>Description</b>	<b>2003 Mini Cooper</b>	<b>2016 Focus</b>
New, Used, Lease	Buy Used	Lease
Interest Rate	5.5%	N/A
Down Payment	\$2,500	\$1,500
